Dear Mr Friedman -

Please stop requiring

cruel & obsolete animal tests for pharmaceuticals
& allow companies to substitute in vitro tests
for the safety of both humans & animals.
Above is what P. & G. does with animals, pouring
liquids in eyes - Also animals & humans are not
the same - example - Aspirin kills Cats & penicillin
kills Guinea Pigs - Yet Guinea Pigs can safely eat
strychnine / one of the deadliest poisons to man, won't
hurt monkeys either - Sheep can eat enormous
quantities of arsenic! Also thalidamide does not
deform animals but it does to humans. if they
had tested only human cells instead of animals a
lot of children would have been saved. I'd be most
grateful. Sincerely S J Lee
